

CONSTRUCTION MATERIALS ENGINEERING TESTING

BECAUSE YOU NEED TO KNOW IT WAS BUILT RIGHT

Geotex Engineering offers comprehensive construction materials testing services to ensure the quality and integrity of your construction projects.

Whether you are constructing a building, road, bridge or any other infrastructure project, our services help ensure your project is constructed according to specifications.

Geotex is here to support the owner and stakeholders during construction to verify compliance with specifications. We are committed to help deliver a project that protects the public health, safety, and welfare.

MATERIALS TESTING SERVICES

The Geotex engineering team specializes in providing a range of specialized testing solutions for various materials in construction projects. Our state-of-the-art facilities, industry expertise, and commitment to quality ensure accurate and reliable results for any specific testing requirements you may have.

SOIL

We evaluate the properties and characteristics of soil to ensure the suitability and stability of the construction site.

CONCRETE

We perform all tests in accordance with relevant standards and specifications to assess the quality and strength of your concrete components.

ASPHALT

We assess the quality and performance of asphalt mixtures used in paving roads, highways, and other infrastructure projects.

AGGREGATES

We evaluate the quality and properties of aggregates used in construction projects to help you select the right materials for your projects.

MASONRY

We provide comprehensive testing for masonry materials used in construction projects.

STRUCTURAL STEEL

We use a wide range of testing services to assess the quality and integrity of structural steel components for your projects.
